# My Medical Record

## Rare Diseases Day 2016

Lex van der Heijden, PMP, Prince2

27 feb 2016

# “MY Medical Record”

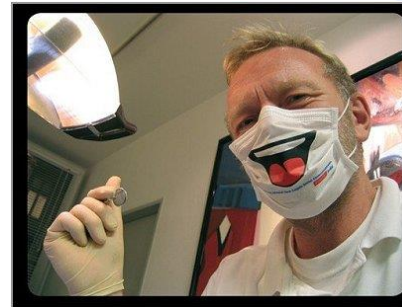

## The problem

- Elvira has CMTC
- She has a medical problem during the weekend
- The GP replacement doesn't have her data: can't help
- Professor offered help at the weekend
- All she needs is a referral

# My Medical records (1)

Data is currently not in one place (fact)

Out of Hours ?

# My medical record (2)

## Potential consequences of non-centralised data

Medical mistakes (not up-to date and not a complete overview)  
Time consuming and awkward (e.g. At another hospital )  
Data not available 24 hrs (in case of accidents, when abroad)  
Rare diseases (what to do and what NOT to do)

Why can I access my bank accounts worldwide at any time  
Why can I access my tax records worldwide at any time.

Why can't I access my medical records ?

# My medical records(3)

## Consequences for the patient (and their family)

(Serious / Permanent ) physical damage or even death  
Psychological damage  
Lack of confidence in medical personell  
...

## Ownership and Responsibility

Who is actually the owner of MY medical record ?  
Who is actually responsible for the accuracy of my medical data  
?

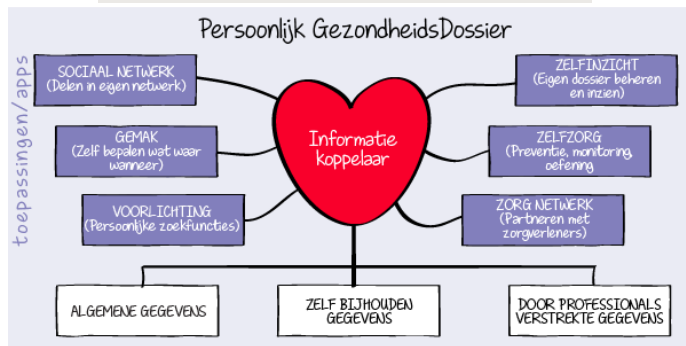

## Cost of Health care (meaning : insurance costs)

What are the costs of medical mistakes as a result of...  
What are the costs of all the duplicated databases....

# In development and existing – EPHR's

Mijn Persoonlijk GezondheidsDossier  
Regie over uw eigen gezondheid

Patiënt1 is het grootste, landelijke Persoonlijk GezondheidsDossier

## And more ??

# The Solution

# The Question

**Who is ACTUALLY  
going to do what and  
when ?**

## Highlights

1. The patient is central
2. Less bureaucracy
3. Lower cost
